Pheromone Communication in Moths and Butterflies ... Our interest is to gain an understanding of communication in the form of exchange of biologically meaningful signals between conspecifics (Schneider, 1965; Wilson, 1970) in moths and butterflies. Originally it was assumed that pheromones are species-specific, that is, each species produced, for example, its own sexual attractant. Communication - Butterflies and Moths The antennae of moths are quite variable, especially the antennae of male moths are often well developed. The antennae of male moths contain sense organs which can detect the species specific pheromones produced by a receptive female.
