Phase Change Energy Solutions: Leader in Efficient ... Phase Change Energy Solutions is a global leader in the development and deployment of innovative energy-efficiency and thermal storage solutions that harness the power of phase change materials. Customers including the U.S. Government, regional retail chains, and Fortune 100 banking, telecom, hospitality, and technology companies have installed millions of square feet of our products with proven results. Phase-change material - Wikipedia A phase change material (PCM) is a substance with a high heat of fusion which, melting and solidifying at a certain temperature, is capable of storing and releasing large amounts of energy. Heat is absorbed or released when the material changes from solid to liquid and vice versa; thus, PCMs are classified as latent heat storage (LHS) units. PCM Products - Official Site An introduction to Phase Change Materials. Phase Change Materials (PCMs) are ideal products for thermal management solutions. This is because they store and release thermal energy during the process of melting & freezing (changing from one phase to another). When such a material freezes, it releases large amounts of energy in the form of latent heat of fusion, or energy of crystallisation.

Frequently asked questions about phase change materials Phase change materials (PCM) are substances that absorb and release thermal energy during the process of melting and freezing. When a PCM freezes, it releases a large amount of energy in the form of latent heat at a relatively constant temperature. Phase Change Material (PCM) Selection | PCM Technology Other PCM materials such as non-paraffin organics, and liquid-to-gas phase change materials are available, but are not often used for electronics heat sinks. Metallic PCMs are generally used at high temperatures, where no suitable paraffin wax is available. Table 1. Phase Change Materials - Thermal Materials by Henkel Phase Change Materials: Replaces Grease as the Interface between Power Devices and Heat Sinks Replaces grease, saving time and money without sacrificing thermal performance. Its no mess- thixotropic characteristics keep it from flowing out of the interface, which means it is easier to handle and not tacky at room temperatures. Phase change materials (PCM) for cooling applications in ... Organic materials. Organic phase change materials are paraffin and non-paraffin, the latter including fatty acids, ester, alcohols, glycols, etcâ€! They have some characteristics making them beneficial to latent heat storage in buildings. CrodaThermâ„ç Bio-based Phase Change Materials Phase Change Materials We manufacture bio-based PCMs that utilise our expertise in organic, plant based chemistries; they are not paraffinics or salt hydrates. CrodaTherm PCMs melt to absorb heat and solidify to release heat at defined, specific temperatures.

Phase Change Fabrics Control Temperature - NASA participated in two Phase I Small Business Innovation Research (SBIR) contracts in 1987 and 1988 with Johnson to assist in the creation of phase change materials for NASA. Prior to these contracts, the company dem-onstrated the value of manufacturing textiles containing microencapsulated phase change materials (mPCMs) for the Air Force.
